BRAC UNIVERSITY Department of Computer Science and Engineering

Quiz 04 Duration: 25 min Full Marks: 15

Name:	ID:	Section:
Name:		

CSE 330: Numerical Methods

- 1. [CO3] The following Data set is generated by the function $f(x) = x^3 + 4x^2 9x 36$
 - (a) (4+6 marks) Show that $g_1(x) = \frac{x^3 + 4(x^2 + x 9)}{13}$ can be derived from the given
 - f(x). Find the actual roots of f(x) and use contraction mapping theorem to find convergence rate for given $g_1(x)$, also state that which root is converging and which one is diverging
 - (b) (5 marks) Let $x_0 = 0$ and e = 0.001, find solution of f(x)=0 up to 2 iterations for using Newton's method, keep up to three significant figures
